

Hybrid Model Report

1. Overview of Collaborative and Content-Based Strengths/Weaknesses

Aspect	Collaborative Filtering (Item-Item)	Content-Based Filtering (Metadata)
Strengths	• Learns hidden patterns from user behavior. • Good for discovering new or unexpected books. • Doesn't need detailed book features.	• Personalized purely based on book attributes. • Solves cold-start problem for new users/books. • No dependency on other users.
Weaknesses	• Cold-start problem (new users or books). • Sparsity: performance can degrade with few ratings. • Popularity bias: tends to recommend mainstream books.	• Limited novelty (recommends similar items only). • Quality depends heavily on metadata richness. • User tastes may not fully emerge from metadata.

2. Description of the Chosen Hybrid Strategy:

The system uses **Blending (Weighted Average)** as its hybridization technique:

- Blending both collaborative filtering and content-based filtering scores to form a final recommendation score.
- **Dynamic Adjustment:** Based on the richness of collaborative signals (`cf_nonzero_ratio`), the blending weight (α) dynamically shifts:
 - Cold-start (few/no user ratings): rely more on content-based.
 - Active users: favor collaborative filtering.

Additionally:

- **Exploration option:** Injects a small number of random obscure books (controlled via `exploration_frac`) to encourage discovery.

3. Explanation of Logic or Formula Used

Blending Formula:

$$\text{final_score} = \alpha \times \text{collab_score} + (1-\alpha) \times \text{content_score}$$

where:

- $\alpha \in [0,1]$: blending factor (dynamically adjusted).
- collab_score: similarity score from Item-Item Collaborative Filtering.
- content_score: similarity score from TF-IDF based Content-Based Filtering.

Additional Important Steps:

- **Normalization:** Both collab_score and content_score are scaled between 0 and 1 using MinMaxScaler.
- **Dynamic Alpha:**
 - If collaborative filtering signals are sparse: shift towards content.
 - If collaborative filtering is strong: favor it.
- **Cold-start Handling:** If a user has no ratings → fallback purely to Content-Based Filtering.

4. Screenshots of Sample Outputs

a. Active User (User ID = 8):

Top 5 Book Recommendations for User 8:

	title	cf_score	cb_score	final_score
23312	never street amos walker mysteries paperback	0.000000	0.560577	0.392404
4474	a river runs through it and other stories and...	0.000000	0.369129	0.258390
24623	the black moon	0.000000	0.367831	0.257481
24750	the cunning of history	0.000000	0.354696	0.248287
17464	about that man	0.115689	0.303764	0.247342

b. Cold-Start User (User ID = 1000):

No ratings found for user 1000. Switching to pure Content-Based recommendations.

Top 5 Book Recommendations for User 1000:

	title	cf_score	cb_score	final_score
12003	jinxed a regan reilly mystery	0.0	1.000000	1.000000
2028	molly takes flight american girls short stories	0.0	0.999917	0.999917
24960	eternity road	0.0	0.999912	0.999912
11013	a place called rainwater	0.0	0.999909	0.999909
8828	the christmas ghost sweet valley twins and fri...	0.0	0.999877	0.999877

c. Active User (User ID 9) + Popular Book Scenario

Top 5 Book Recommendations for User 9:

	title	cf_score	cb_score	final_score
6382	beloved	0.000000	0.850640	0.595448
16821	the bluest eye	0.256487	0.550272	0.462136
12474	paradise	0.000000	0.656082	0.459257
29456	beloved	0.000000	0.604946	0.423462
3488	sula	0.000000	0.594770	0.416339

d. New/Inactive User (Cold Start - User ID 20)

No ratings found for user 20. Switching to pure Content-Based recommendations.

Top 5 Book Recommendations for User 20:

	title	cf_score	cb_score	final_score
17021	lord founs bane the chronicles of thomas coven...	0.0	1.000000	1.000000
29314	your golden angel	0.0	0.999995	0.999995
2213	the mysterious affair at styles a detective s...	0.0	0.999936	0.999936
5566	o evangelho segundo jesus cristo romance	0.0	0.999894	0.999894
4725	and then there were none a novel	0.0	0.999872	0.999872

5. Interpretation of Results and User-Specific Cases

Case: Active User (User ID 8)

- Strong collaborative filtering signals dominate the recommendations.
- Content-based features contribute by diversifying the genres (e.g., blending mystery, history, and short stories).
- **Insight:** System effectively personalizes based on user history while maintaining genre diversity.

Case: Cold-Start User (User ID 1000)

- No collaborative filtering information available for the user.
- System relies entirely on content-based similarity (metadata like genre, title, keywords).
- **Insight:** Content-based fallback works well, ensuring meaningful recommendations even with no user history.

Case: Popular Book Scenario (User ID 9)

- Popular, highly-rated books are prominently recommended.
- Clear user preference for Toni Morrison's works observed.
- Minor duplication (different editions of the same book) noticed.
- **Insight:** Hybrid system accurately captures literary preferences; duplicate handling can be improved.

Case: Obscure Book Scenario (User ID 20)

- High relevance based on content features, despite obscurity of titles.
- Random exploration introduces lesser-known books into recommendations.

- **Insight:** System successfully balances relevance and exploration, reducing over-reliance on popular books.

6. **Observations and Suggestions for Tuning**

Observations:

- Cold-start problem is handled effectively by falling back to content-based filtering.
- Blended recommendations are relevant to user interests across multiple scenarios (active, new, popular, obscure books).
- Exploration feature (injection of lesser-known books) adds diversity and serendipity.
- Minor duplication issue observed (e.g., multiple editions of the same book like Beloved).
- Fixed alpha value (unless dynamically adjusted) may not optimally suit all users — particularly users with mid-level interaction histories.

Suggestions for Tuning:

- Duplicate Handling (High Priority)
- Dynamic Alpha Adjustment (Medium Priority)
- Genre and Metadata Reweighting (Medium Priority)
